

You are invited to attend a small group interactive **live patient workshop**, hosted by Dr Andrew Kaines and Dr Jay Yohendran.

You will **witness an intravitreal injection** being performed.

You will also assess a patient who had cataract surgery, combined with **ECP**, a few hours before the workshop.

If you have patients who undergo intravitreal therapy, but you have not seen an injection being performed yourself, you will gain a great deal from this workshop. If you are not confident assessing for **anterior chamber cells**, this would be a good opportunity to hone your skills.

Join us to experience the **patient journey**— from diagnosis to treatment of:

1 Macular Degeneration with Andrew Kaines.

Discussion will include:

- The benefits of wide-field angiography
- How to perform the injection painlessly
- How to minimise endophthalmitis risk
- Dealing with co-existing cataract

2 Glaucoma and Cataract patient with Jay Yohendran.

Discussion will include:

- The role of Endoscopic Cyclophotocoagulation
- IOL power calculation - how to prevent a post-operative surprise
- Equipment used for pre-operative refractive planning
- Dealing with post-operative inflammation

DATE: Tuesday 26 April 2016

TIME: Arrival at 6.00pm | Presentations **start at 6.30pm**
Evening will conclude at 8.00pm

WHERE: Northern Beaches Retina | Cataract | Glaucoma
Suite 101, Level 1, 694-696 Pittwater Road, Brookvale
